kasif-portfolio.netlify.app
github.com/MdKasif0 · x.com/md_kasif_uddin
India · Open to work

I build AI products and the backend systems behind them: LLM pipelines, APIs and data models that hold up in production, plus native desktop apps. I take work from first idea to launch, and build in public on X.

SELECTED PROJECTS

GitRoasted · AI scoring and roasts for any GitHub profile — Next.js, TypeScript, Groq, Firebase · 2025–now

- Scores a profile out of 1,000 across eight dimensions in plain code, so the leaderboard stays fair. An LLM only writes the words.
- One server action crosses the GitHub API, scoring, Groq and Firestore, with a median live roast of about 2.1 s over 5 runs.
- Capped inputs (1,000 repos, 100 events, 20 commits), a 5-minute cache, tolerant JSON parsing, model fallback and server-only leaderboard writes. 21 GitHub stars.

AI Checkers Arena · Live, server-authoritative LLM matches — Next.js, TypeScript, OpenRouter, Supabase · 2026

- The server owns the rules: it rebuilds the board from a Postgres move log, offers the model only legal moves and validates every answer before saving it.
- Up to 3 attempts with rising temperature, then a recorded fallback move, so a match always finishes. Forced moves skip the model and spend no tokens.

GigSense · Local-first ledger for gig couriers, 1st Runner-Up at InnoSprint 2.0 — Next.js, IndexedDB · 2026

- Profit maths and evidence stay on the device in three IndexedDB stores, and a service worker keeps it running with no signal.
- AI only interprets: at most 20 text descriptions per request, no files ever leave the device, and replies are validated before they reach the screen.

Cookie · Native desktop companion for macOS and Windows — Swift, SpriteKit, AppKit, Sparkle, C# · 2026

- Shipped on both platforms within 10 days of the first commit, with 126 macOS unit tests, in-app signed updates and no account, analytics or cloud calls.
- Reads window positions through Quartz with no screenshots, passes clicks through transparent pixels, and drops from 60 to 15 FPS while she sleeps.

Shadow of the Crimson Gate · Action game that runs in a browser tab — Three.js, TypeScript, WebGL, Web Audio · 2026

- 19,895 lines of TypeScript on my own game loop, combat, AI, audio and save systems, with 237 KB of compressed JavaScript at first load.

ReleaseStack · AI outreach platform for startup launches — Next.js, Supabase, Groq, Resend

- Single-admin platform that automates launch promotion on X, from content generation to scheduled outreach, on Postgres and transactional email.

Also: Object Detection Suite (YOLOv8, OpenCV), Kerr Black Hole (Blender, Python), TrustLayer (media verification), iWriteTech (MDX affiliate platform). Case studies and live demos are on my site.

EXPERIENCE

Freelance AI Software Engineer & Backend Architect — 2025–Present

- Design and build AI-powered software from first idea to production, pairing applied AI with solid backend architecture.
- Integrate third-party APIs and cloud services, including auth, storage, payments and email.

Tech Content Creator on X — 2026–Present

- 6,500+ followers, and 20+ collaborations with AI and tech brands, including Moonshot AI, Tavus, daily.dev, TinyFish and Blackbox AI.

SKILLS

Languages	TypeScript, JavaScript, Python, Swift, C#
Backend & data	Node.js, REST APIs, PostgreSQL, Supabase, Firebase
AI & ML	LLM integration, Groq, OpenAI, Gemini, OpenRouter, Hugging Face, TensorFlow, YOLOv8
Frontend	React, Next.js, Tailwind CSS, Three.js
Tools	Git, Docker, n8n, Netlify, Vercel, Figma

RECOGNITION

1st Runner-Up, InnoSprint 2.0 · 2026
Solo hackathon by D4 Community × Google for Developers, Chandigarh University.

TrustLayer, Hackverse · 2026
Terrabyte Society, Chandigarh University.

EDUCATION

B.Tech CSE · 1st year, 2026–now
Chandigarh University, Mohali.
